### Committed to Your Success

Peregrine Education Services offers a wide range of training products, services, and programs designed to enable your staff to use Peregrine solutions with skill and confidence. We are committed to serving your training needs throughout the evolution of your business.

### Peregrine Site Training

Peregrine state-of-the-art training centers are located throughout the world. Expert instructors deliver training designed to reflect real-world implementation scenarios. Peregrine training labs enable you to practice your skills, and hands-on proficiency exercises instill confidence in your knowledge.

### Customer Site Training

Education Services will send our world-class instructors and professionally designed training materials directly to your company's training facility. Using your classrooms and lab equipment to train your staff is convenient and minimizes travel expenses.

1 to 8 Students: \$3200/Day + instructor T&E  
Additional Students: \$250/Person/Day  
Maximum Class Size: 15

See: <http://www.peregrine.com/education> for hardware and software requirements.

### Training Road Shows

If you are interested in customer site training but have fewer than eight students, consider hosting a Peregrine Training Road Show. By using your company's training facilities to host training for other Peregrine customers, your company will receive one free seat for the course.

And, because our road shows are not private classes, Peregrine pays for instructor T&E.

Education Services can help you network with customers with similar training needs. For more information, e-mail us at: [education@peregrine.com](mailto:education@peregrine.com)

### Professional Instructors and Materials

Peregrine Education Services instructors are highly experienced. Their extensive product knowledge and best-practice implementation recommendations enable you to quickly master Peregrine solutions. Your new skills will enhance your motivation, confidence, and job performance.

### Virtual Classroom – Live and Recorded

Virtual Classroom – Live (VCL) training classes are instructor-lead training classes broadcast via the Internet. VCL classes include application sharing, real-time two-way voice, and IM with the instructor and students. Virtual Classroom-Live (VCL) and on-demand Virtual Classroom-Recorded (VCR) training classes offer easy access to Peregrine training and product update information.

### Web-based Training

Peregrine Web-Based Training (WBT) classes feature interactive software simulations designed to help you learn at your own pace. WBT courses include built-in assessments to test knowledge and provide feedback. WBT courses can be accessed via the Internet anytime, anywhere, and instructors are available via e-mail to answer your questions.

### Schedules and Pricing

See: <http://www.peregrine.com/education> for class schedules and pricing.

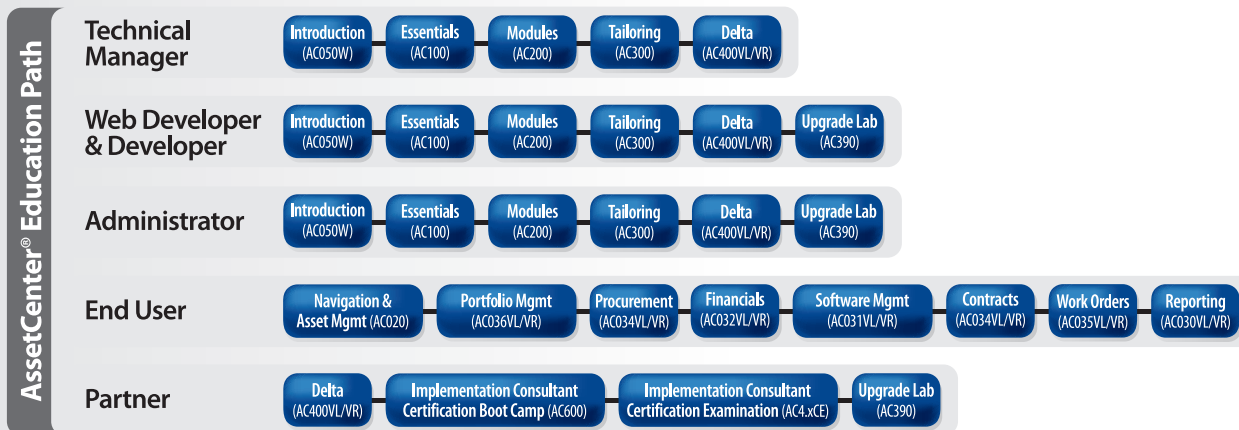

# AssetCenter Training Recommendations

Peregrine's solutions help your company to evolve their IT service management and asset management capabilities. With Peregrine expert system design, practiced implementation, training, education, and ongoing technical support, we can help you to achieve a higher level of automation in your infrastructure and service management processes.

AssetCenter Training Courses	TECH MANAGER	WEB DEVELOPER	DEVELOPER	ADMINISTRATOR	END USER	PARTNER
Navigation & Asset Management (AC020W)	Oversees the implementation and use of software solutions; works with developers, administrators and partners to test and deploy applications.	Designs, tests, deploys web-based applications in conjunction with managers and administrators.	Designs, tests, deploys software; performs basic and advanced tailoring using scripting; modifies map and string tables, and data reconciliation.	Performs installation, server configuration, maintenance, scheduling, reporting, troubleshooting, and security profiles. Modifies or builds workflows on a limited basis.	Uses the application after it has been fully developed and implemented. End User implies an individual with a low level of computer expertise.	Assesses individual business needs; designs, tests and implements solutions in conjunction with client managers.
